[Begin Audit]

IN THE CLAIMS:

Claims 5 and 16 have been amended as follows:

5. (Currently Amended) A method of processing a message received at a user equipment (UE) from a UTRAN, Universal Terrestrial Radio Access Network, configured for use in a UMTS, Universal Mobile Telecommunications System, communications system, wherein the message includes a Ciphering Mode Info information element and is one of a plurality of message types comprising a Radio Bearer Setup message,

a Radio Bearer Reconfiguration message, a Radio Bearer Release message, a Transport Channel Reconfiguration message, a Physical Channel Reconfiguration message, a Cell Update Confirm message, a URA, UTRAN Registration Area, Update Confirm message and a UTRAN Mobility Information message, the method comprising:

determining whether a Ciphering Activation Time for DPCH, Dedicated Physical Channel, information element that identifies a ciphering activation time is present in the message when radio bearers exist using radio link control (RLC) transparent mode (TM); and

in the event that the information element is not present, selecting an activation time for applying ciphering changes for the transparent mode radio bearers, and returning the selected activation time using a COUNT-C Activation Time information element.

16. (Currently Amended) User equipment (UE) for receiving a message from a UTRAN, Universal Terrestrial Radio Access Network, and configured for use in a UMTS, Universal Mobile Telecommunications System, communications system, wherein the message includes a Ciphering Mode Info information element and is one of a plurality of message types comprising a Radio Bearer Setup message, a Radio Bearer Reconfiguration message, a Radio Bearer Release message, a Transport

Channel Reconfiguration message, a Physical Channel Reconfiguration message, a Cell Update Confirm message, a URA, UTRAN Registration Area, Update Confirm message and a UTRAN Mobility Information message, the user equipment comprising:

a control module for determining whether a Ciphering Activation Time for DPCH, Dedicated Physical Channel, information element is present in the message when radio bearers exist using radio link control (RLC) transparent mode (TM);

the control module being configured to select an activation time for applying ciphering changes for the transparent mode radio bearers, in the event that the information element is not present and to return the selected activation time using a COUNT-C Activation Time information element.

[End Audit]

Claims 4, 10 and 15 are cancelled.

Allowable Subject Matter

3. Claims 1-3, 5-9, 11-14 and 16 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest directly or indirectly the limitation, “in the event that the Ciphering Activation Time for DPCH information element is not present, refraining from acting on the message and returning a message with an error return value indicating the absence of the information element,” as claimed in independent claims 1 and 14, and the limitation, “in the event that the information element is not present, selecting an activation time for applying ciphering changes for the transparent mode radio bearers, and returning the selected activation time using a COUNT-C Activation Time information element,” in independent claims 5 and 16, along with other limitations of the claim.

Any comments necessary by applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance”.
